FUND MANAGER COMMENT

Artea Emerging Markets Ex-Dictatorship Bond Subfund returned 0.1% during February, bringing year-to-date performance to 1.7%, slightly more than the benchmark's 1.3% YTD gain.

Yield contraction was evident across the world with very few exceptions during February, with 10y government yields decreasing ~20 bps during the month. The catalyst – backward looking inflation data showed signs of cooling, as US inflation fell to 2.6% and in fell below 2% target in Europe. This also fueled lower market projection of long term inflation, which gave a boost to the bond market. Emerging Markets continued to exhibit strong performance, with spread to 10 US government yield reaching all time low level since data is available from 1999. Despite this, Brazil's high yield market was hit by unease as prospects of restructuring started rising in Raizen Fuels. Reports of private water treatment company Aegea being involved in bribery activities also surfaced. Negative market sentiment also affected bond prices of other Brazil's more leveraged issuers, e.g. CSN Resources (which the fund owns). There have been several Risk premiums also contracted in CEE, as governments' yield spread is currently at 5 year lows relative to Western Europe peers. Romania was among the best performers, while Fitch reaffirmed countries BBB rating.

Artea Emerging Markets Ex-Dictatorship Bond Subfund continued seeing inflows and added to some current positions. The fund also participated in primary market of Indonesia's 2038 bonds. Indonesia, conversely to the rest of Emerging Markets, did not perform too strongly over the last few months. Overall, the fund maintains lower interest rate sensitivity than the benchmark (4.5 and 6.2 duration, respectively) while providing better yield to maturity (5.9% vs 4.0%, respectively).

*Data for Artea Emerging Markets Ex-Dictatorship subfund Class K before 2025-12-01.
 **Standard deviation is used to measure risk. Standard deviation is an indicator that measures how strongly fund's daily return deviates from its mean. The lower the standard deviation the lower the fund's risk. The standard deviation value corresponds to the period shown in the historical returns graph.
 ***Sortino ratio is used to measure the risk-adjusted return of the portfolio. It is a modification of the Sharpe ratio but penalizes only those returns falling below required rate of return. Sortino ratio is obtained from Bloomberg which measures the ratio over a 3-year period at a daily granularity. Information displayed for Class K.

BREAKDOWN OF INVESTMENTS

The Fund does not have exposure to Russian and Belarusian bonds

REASONS TO INVEST

- Historically, Emerging market economies have been growing almost twice as fast as Developed markets.
- Government debt levels in emerging markets are twice as low as in developed countries.
- High active share investing into up to 25 most attractive investments by identified market mispricings, EUR and USD issues arbitrage and off-benchmark opportunities while avoiding certain issuers.
- Relatively low volatility due to investments in shorter-duration corporate bonds and less indebted as well as better rated government and off-benchmark picks.
- Combination of only hard currency (USD risk hedged to EUR) sovereign and corporate debt ensures attractive yield, while limited credit and duration risk provides for low volatility.
